Stability and Innovation—Leading the Way to New Possibilities.

About Us

LeBrush Lab was founded with a clear mission: to address the challenges posed by the high and often fluctuating cost of Kolinsky hair, as well as its inconsistent supply. As the market began seeking alternatives, we recognized a unique opportunity for innovation. After years of research and development, we discovered a natural material that provides a stable and economical alternative to Kolinsky hair.

Our journey has been built not only on advances in material science but also through close collaboration with dental technicians and professionals. Through continuous testing and refinement, we ensure that every brush meets the rigorous standards required in practice. Feedback from experts has guided us in optimizing our product, achieving ideal levels of flexibility, durability, and smoothness to fully meet the precise needs of dental technicians in porcelain work.

Harmony Porcelain Brush

Perfect Harmony, Enduring Quality.

Harmony Porcelain Brush

L08

The thick brush tip is suitable for applying porcelain on large surfaces, improving efficiency while enhancing the strength and aesthetics of the dental prosthesis.

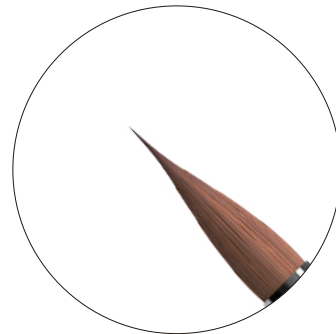

S08

Ensures a natural transition and perfect fusion of porcelain layers, with precise powder layering in hard-to-reach areas, restoring the tooth's anatomy realistically.

L06

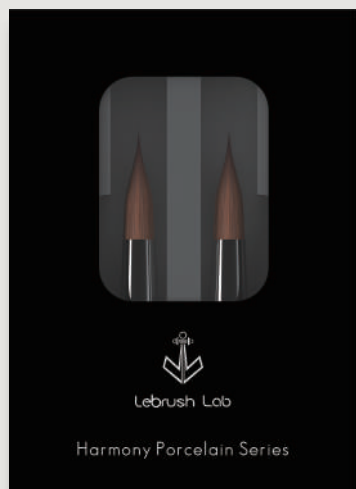

Balances precision and coverage, ideal for crown surfaces, providing even porcelain thickness with a natural color transition.

S06

The long-tipped design aids in shaping complex tooth structures, ensuring precise porcelain layering and a smooth, natural form.
